

REALTECH

Making SAP perform on Windows Server System.

The physics of business is changing. Information is moving at breakneck speed. Decisions are made faster. How do you keep up?

What do you do when you simply must have higher performance, greater reliability, the latest security and the scalability to grow?

How do you do more with less and at a lower total cost of ownership?

There is a solution: **Windows Server System™ from Microsoft®**. And it runs SAP with world-class performance.

- > SAP certified at 26,000 users on Microsoft SQL Server™ 2000 with an average response time of less than two seconds—the best result on Windows Server™.
- > SAP certified top performance on SQL Server (67 million rows/hour) for SAP Business Information Warehouse module on Unisys hardware.

REALTECH can help you run SAP seamlessly on Windows Server System.

- > Each of REALTECH's 500 consultants is a trained SAP specialist with comprehensive, real-life project experience.
- > They are experts in leveraging the IT infrastructure to deliver competitive advantage.
- > REALTECH has successfully completed over 200 SAP R/3® Operating Systems/Database migration projects since they implemented the first productive migration in 1998.

To ensure a successful migration, REALTECH adheres to the following steps:

Preplanning Investigation:

- > Support research of supportable platforms
- > Analyze potential benefits
- > Assess hardware sizing requirements
- > Training

Migration Planning:

- > Regression testing and stress test planning
- > Modifications of interfaces to legacy or other systems
- > Training to provide IT staff with necessary knowledge and skills to maintain the new platform
- > Business continuity planning changes
- > Backup and recovery schemes

REALTECH

For over ten years REALTECH, a leading international technology consulting firm for SAP and mySAP® systems, has served over 1,500 companies worldwide in a wide range of industries, managing, optimizing, and reliably operating their IT landscapes and data centers. REALTECH offers a diverse range of consulting services for complex SAP NetWeaver and mySAP® infrastructures—helping customers to effectively deploy these innovative technologies and protect their investment. REALTECH focuses on two key areas: IT optimization/harmonization and Web technologies/innovation. The company helps customers cut total cost of ownership (TCO) and meet changing, and increasing, IT demands. REALTECH performed one of the first SAP OS/DB migrations in 1998 and, since then, has successfully completed over 200 migration projects.

Execution:

- > Move data from existing "source" systems to new "target" OS/DB with SAP developed migration toolkit in least amount of time feasible
- > Verify the integrity of the data
- > Ensure that the target system is properly tested

Post Migration Support:

- > Any level of SAP R/3 support
- > Basis and technical consultants remotely or on-site until IT has a high level of confidence
- > Analyze performance of problem transactions (source or target systems)
- > Remote monitoring, remote administration, and remote consulting for an extended period of time

Some of the leading names in business are migrating. Some are doing it for better performance, some for lower costs, some just for better overall business experience. But at the end of the day it comes down to results.

The bottom line is this: Windows Server System provides enterprise-class performance to maximize uptime and ensure scalability. It reduces TCO by lowering licensing, maintenance, and system administration costs. And it reduces complexity, manages heterogeneous environments, leverages information from multiple sources, and increases productivity — all with new levels of scalability and reliability.

So if you're running SAP, REALTECH can help you keep it running on application replatforming from Microsoft.
